Issue shares of far-right protest events by country, 2008–2021

Note: Bands show each issue's share of all issue mentions in a year (each event can raise up to three issues); grey bars show the number of events per year. Shares in years with few events (e.g. one event in the Netherlands in 2011 and in Poland in 2009) rest on very few cases.
The five issues are the most frequent across the six countries combined, so the grey band can be large where a country's protests centre on other issues (e.g. Poland: civil rights & religion; Spain: other). Issue labels as coded in the dataset. Streams pass through every yearly value.
